Our Mission We believe... “A child without a computer is like a school without pencils.” The mission of Neighbors Empowering Youth is to eliminate the “digital divide” by providing innovative hi-tech tools and STEAM based workshop to youths and young adults who will become productive members of society. We are committed to offering collaborative, participant-focused, project based programs that supports learning activity that boosts core academic skills. We strive to provide after- school programs that will substantially enhance academic performance, and promote social skill development, workforce expansion, educational programs, networking and business development. Neighbors Empowering Youth wishes to be there when you need information on subjects that can help your family or community. We teach low income and at risk youth the skills necessary to find jobs in the fast growing Information Technology (IT) and Technology fields to build the confidence and relationships they need to move forward with their education and careers. Our after school programs have the ability to excite children about learning, spark their curiosity and connect school-day lessons to their everyday lives.
